*Aerocoat*<sup>TM</sup>

# INTERIOR

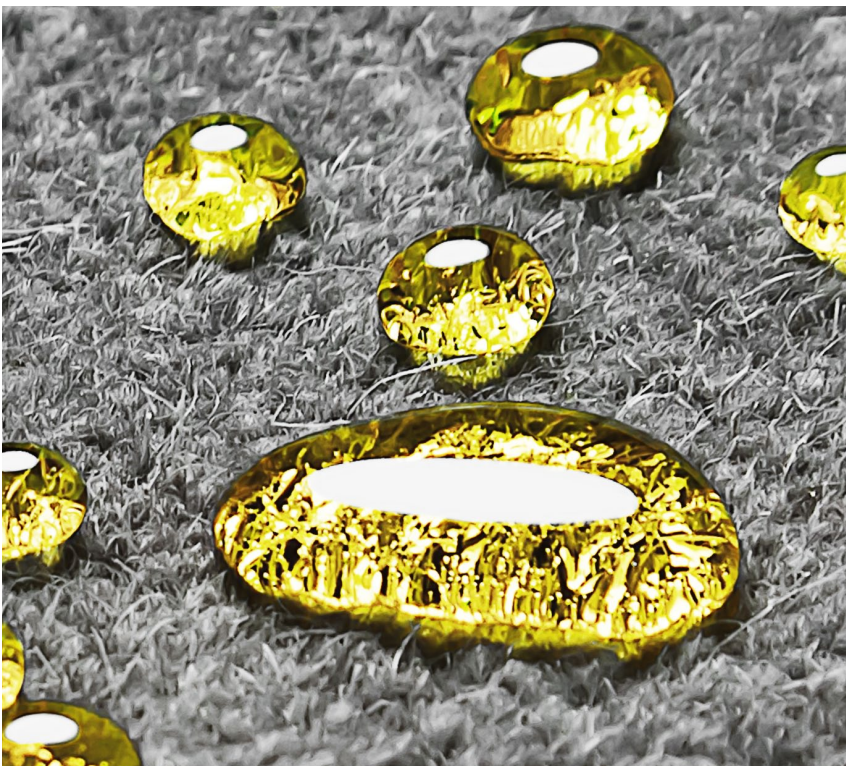

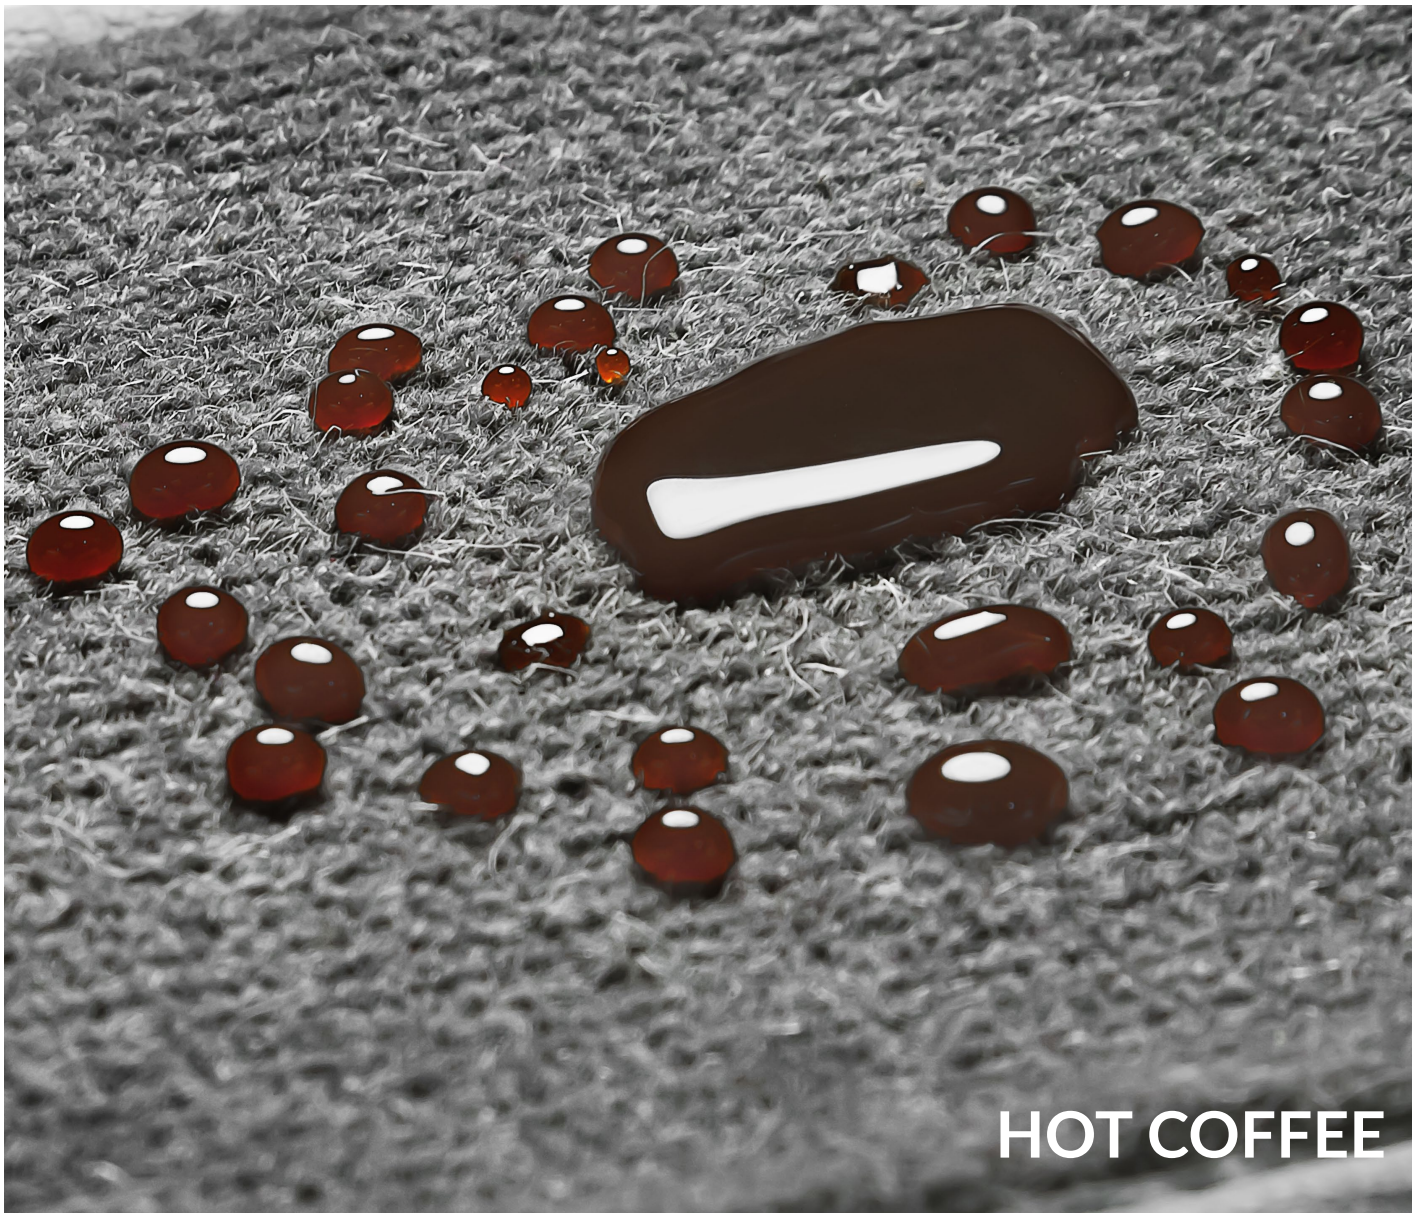

Aerocoat helps to eliminate stains from aircraft carpet and upholstery meaning jet owners can travel in comfort knowing that in-flight liquid spillages won't result in expensive cleaning and maintenance costs.

Aerocoat creates a barrier between the material and liquid ensuring that spillages cannot penetrate the surface and seep through.

Red wine spilt on a carpeted surface that hasn't been treated by Aerocoat will quickly seep through the material and create a permanent stain.

**Aerocoat is anti-bacterial  
and anti-mould  
so perfect for application  
across aircraft kitchen and  
restroom areas.**

**Can also be applied to  
stone and wood surfaces  
ensuring a “new from the  
factory” style appearance  
on board jets at all times.**

# Aerocoat<sup>TM</sup> EXTERIOR

The ultimate in high performance surface science and approved by Boeing.

Application of liquid glass to the exterior of aircraft.

Process is applied under EASA CAA Part M approval in controlled conditions.

From London to LA, Aerocoat guarantees improved ramp presence by ensuring aircraft exterior looks brand new 24/7.

UV resistant and reduces cleaning time and costs for aircraft owners.

Reduces boundary layer drag meaning improved aerodynamic performance and less fuel costs.

Process is guaranteed by Aerocoat International for three years.

*"Aerocoat is an astonishing product, it has revolutionised my cleaning operation and that special gleam you get on a new aeroplane is always there."*

- Tim Orchard, former Captain of Concorde.
